Updated Project Proposal

Previously on Piazza I stated that I was planning on creating an app to encrypt and decrypt messages. I initially started in swift since I was creating another app for my Enterprise Mobile Development class but since we have to leave Marist due to the CoronaVirus, I no longer have access to the Mac Labs. Since I have a PC and can only access windows, I will be switching over to Android Studio. I will be creating an android app to encrypt and decrypt plaintext in RSA. The UI for the app will be simple and easy to use for the user. The name for my application will be Encoder.
